Guidelines for the International Combustion Institute Summer Schools, ICISS 2016-01-13

Background

As is described in the Mission statement of The Combustion Institute, the most important aspects of CI are to be an international, educational and scientific society, with the purpose to promote and disseminate research in the areas of combustion science. The most important aspects of doing this are the biennial International Symposium on Combustion as well as the responsibility for the journals Combustion and Flame and the Proceedings of the Combustion Institute. To further enhance the outreach activities and to foster a new generation of combustion scientists, the Board of Directors decided to establish the International Combustion Institute Summer Schools (ICISS). To allow preserving the freedom of initiatives and the diversification of topics and style, the Combustion Institute will for the organization of the ICISS invite local host/proponents, identified according to the present guidelines, to be responsible for of the event.

Objectives

For the Combustion Institute the main objectives for an engagement in ICISS would be:

- The CI would be made more visible for students and young scientists at an early age
- By placing the ICISS engagements in different continents and countries and by promoting the international participation, CI will be able to harmonize and promote the global growth of Combustion science and technologies according to its mission. By proper announcement of ICISS, the area of combustion and the corresponding societal needs e.g. sustainable energy supply, minor impact on our environment, safe and cheap transportation, fire suppression etc., would be made more public.

For the participating students the main objectives would be:

- To attend a meeting with world leading scientists giving ample time for personal discussions

- To build a long-lasting international network with peers and senior scholars
- To receive a high quality intensive educational infusion in the field of combustion

Format

For the format of ICISS, the items below should act as guidance.

1. ICISS should be an international summer school for young scientists, preferably master/PhD students and post docs, mainly from a specific continent or subcontinent (e.g. North America, Europe, Asia, Australia, South America).
2. ICISS should be announced as an International Combustion Institute Summer School in cooperation with the local host.
3. The Combustion Institute should announce for ICISS proposals once a year with the ambition to be able to finance up to 3 proposals depending on the financial situation of CI, and the number of good proposals. The announcement to hold an ICISS should be sent to all Section Chairs for optimum awareness of the possibility to be the host of an ICISS.
4. The selection of the ICISS participants should be made on a basis of geographical spread, scientific diversity as well as fulfilling the general statements in the CI By-Laws in terms of gender, religion and race.
5. The duration of the Summer School could vary in time from a couple of days up to a week or more, but a nominal guideline could be one week.
6. The Lectures should be given by highly recognized senior scientists covering distinct aspects of combustion. Topics and invited speakers are chosen by the local host, where the topics are those typical of Combustion Symposia Colloquia. The VP Section Affairs of CI should be available for input and advice if needed. If possible the Summer School should also include some lectures on industrial challenges and topics given by industrial representatives.
7. The arrangement is a close and collaborative one between the local host and CI, in a win-win situation, where CI helps cover some expenses and guide the quality of the event For this reason, in the announcements, the website and in the promotional materials it should be highlighted that ICISS is a joint effort between the local host and CI.
8. The local host is expected to share the cost for the ICISS with the CI. For the student, preferably all costs should thus be covered except travelling to the host site; e.g. accommodation, meals, local travelling, social activities, invited lectures, lecture notes, etc. There are no definite percentage to what extent CI

should contribute to the total cost of a specific ICISS but a 50/50 arrangement could be used as a guidance (normally a maximum of 50 kUS\$ will be paid by CI).

9. The Summer School should provide ample time for networking between the students where various joint activities should be arranged to optimize this.
10. If possible the local organizers should also arrange laboratory visits, career panel discussions or other academic activities.
11. The Summer School should routinely after each event be evaluated, e.g. by suitable anonymous questions to the students.

Submission and Selection Procedures

In order to have a fair and predetermined procedure for the submission of proposals to hold an ICISS and consequent selection processes the following information can be given.

- All interested parties wanting to hold an ICISS during a specific year should submit a proposal to the CI office the year before the meeting is to be held with a deadline at 31 March.
- The proposal should include the following points (< 10 pages)
 - A description of the organizing committee of the proposed ICISS
 - A description of the site, lecture room facilities, accommodation and eating facilities
 - The financing plan
 - A preliminary program, including potential joint activities, laboratory visits, excursions, etc.
 - A preliminary direction of the scientific contents. (No names of invited lecturers are required in the proposal).
- The proposals will be evaluated by a small group headed by the VP Section Affairs, including the Secretary Section Affairs and 1-2 additional persons appointed by the VP Section Affairs. The criteria for the evaluation will be based on the above reported Guidelines and the general prescriptions of the Combustion Institute governing bodies. Proposers may be requested to provide additional materials useful to clarify organizational and financial aspects of their proposals. A recommendation will be given to the Executive committee which takes the formal decision. This decision will be taken no more than three months after the deadline of submission, i.e. July 1, corresponding to the deadline above.

- A proposing group or institution is allowed to submit a proposal for a rerun of an ICISS. However, there will be a time period of three years, where priority will be given to qualified proposals from other sections/countries/groups. This will ensure that there can be a diversity of ICISS organizers around the world.

The decision of the ICISS to be run the following year will be announced on the CI homepage as soon as possible after the decision.

A pilot of ICISS was performed in Lund in 2013 and this could be seen as a raw model, still with possibilities to make local changes and rearrangements.

The ICISS activity will be evaluated on a three years basis, when the Board will take decision of the overall budget and direction for the upcoming period.
